

To Whom It May Concern,

In 2013 Micro Motion Inc., a division of Emerson Process Management, began working with Lamers HTS of The Netherlands on multiple flow equipment fabrication projects. These projects were under a very aggressive schedule and involved CE and engineering review, regional sourcing challenges, fabrication/assembly, factory performance testing and demonstration, international shipment, and final on-site installation in the Micro Motion facility. Lamers HTS embraced every challenge associated with the projects and delivered world-class products to Micro Motion. Their project management practices were professional and disciplined and promoted a solution-oriented culture.

As the world leader in flow measurement, Micro Motion requires suppliers with a matching commitment to excellence. Lamers demonstrated this time and again, which led to a natural and collaborative partnership throughout the equipment fabrication process. This partnership has enabled Micro Motion to continue delivering state-of-the-art products to our customers in less time. The showcase quality equipment demonstrates to customers, suppliers, and stakeholders, Micro Motion's strong commitment to quality and producing the world's most accurate flow measurement solutions.

We look forward to working with Lamers HTS again in the future as we seek to continuously improve our equipment and processes, as part of our commitment to total customer satisfaction.

Sincerely,  
Sven M. Nuesken, P.E.
